CONSTRUCTING AND UNDERSTANDING A GLOBAL HALAL ECOSYSTEM

Halal is far more than a simple descriptive label; it is a complex, dynamic global ecosystem that intersects with values, tenets, scientific knowledge, legal frameworks, cross-border innovation, and international collaboration. This volume presents a comprehensive analysis of the conceptualization and operation of the global halal ecosystem through an integrated approach that draws upon philosophy and sociology, jurisprudence (*fiqh*) and law, science, and innovation. Furthermore, it meticulously examines the profound relevance and strategic implications for Indonesia as it endeavors to become a pivotal hub for the global halal industry.

Authored by distinguished academics and highly skilled and experienced practitioners, this work provides both in-depth exploration of fundamental halal concepts and principles, alongside a set of strategic perspectives designed to fortify Indonesia's positioning and competitiveness within a sustainable, inclusive, and globally integrated halal ecosystem.

This is an essential text for academics, researchers, policy-makers, and all stakeholders committed to the rigorous development of the halal industry and its contribution to the future of the global economy and public welfare.
